(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated Gallup Rio Arriba County New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6556 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to dual complete this well in the Gallup formation. Present TD of well is 6832' w/5 1/2" casing at 6832'. Dakota perforations are at 6756' & 6764'. The proposed work is as follows: set Model "D" packer between Dakota & Gallup formations. Perforate Gallup interval from 5597' to 5812' and sand frac the Gallup. Set Model "IDE" packer at 5500'. The Gallup will be produced through the tubing and the Dakota through the casing-tubing annulus. Approval has been obtained from the New Mexico Oil Conservation Commission to dual complete this well.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
