New Mexico Oil Conservation Commission (2)
1000 Rio Brazos Road
Aztec, New Mexico

Gentlemen:

As required by Commission Rule 112-A, please be informed that the packer leakage test on the Northeast Haynes Well No. 6, Unit D, Section 15, T24N, R5W, Rio Arriba County, New Mexico, indicated that communication exists between the separate strata. Because the zones stabilized at an identical pressure, and the first flow test did not indicate communication existed, it is believed that a leak in the tubing or a tubing head leak has developed. Remedial action to determine and correct the cause for communication will commence immediately. The commission will be immediately notified when the work is completed and another packer leakage test is to be commenced.

Very truly yours,
