Texaco proposes to isolate, for production purposes, a casing hole that has been identified at 1440'-1450' on the subject well. Three attempts to squeeze this leak have been unsuccessful and have not even made significant progress. The leak will bleed off to ~400 psi and stabilize when tested. The leak will be isolated using a Guiberson retrievable casing patch as follows:

1. MIRUSU. TOOH w/ tbg & pkr.
2. TIH w/ tbg, retrievable casing patch w/ 1 jt. 3-1/2" tbg, and UNI V packer set 1 jt. below patch.
3. Land patch @ 1425'-65' and set packer.
4. Test patch to 1000 psi.
5. NU wellhead and prepare well for production. RDMOSU.

This sundry confirms verbal approval given by Wayne Townsend to Brad Weiss, Texaco on 8-17-90.
