Amerada Hess Corporation respectfully requests that production requirements be suspended for the above well under long term shut-in status for a period of one year or until the well can be produced at a profit. Amerada Hess recompleted the wellbore in December, 1990 from the Basin Dakota to the Ballard Pictured Cliffs formation. Subsequent testing of the well, indicated a shut-in tubing pressure of 150 psig, which is insufficient to buck sales line pressure of 180 psig. Future plans are to either re-fracture the P.C. zone or to set a compressor to buck line pressure. Neither of the options are economically viable until market conditions improve.
