17. DESCRIBE PROPOSED OR COMPLETED OPERATIONS (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)\*

On July 13, 1987 well started producing 100% water. Water analysis indicated possible source from the Burro Canyon formation. A cement retainer was set at 7250'. However, production remained 100% water with continued testing.

Found casing leak with BP and packer at 4712'. Cement squeeze leak with 50 sxs Class "B" on 7/23/87. Drilled out cement, squeeze did not hold. Did second squeeze on 7/25/87 with 75 sxs Class "H" neat. Drilled out cement, pressure tested squeeze to 975, held O.K. Returned well to production.
