Figure 1. A schematic diagram of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group received a standard 12-week training program, while the experimental group received a modified 12-week training program. The modified program included a 4-week pre-training period followed by an 8-week training period. The subjects were then divided into two subgroups: the control subgroup and the experimental subgroup. The control subgroup received a standard 12-week training program, while the experimental subgroup received a modified 12-week training program. The subjects were then divided into two subgroups: the control subgroup and the experimental subgroup. The control subgroup received a standard 12-week training program, while the experimental subgroup received a modified 12-week training program.

Item 4: If there are no applicable State requirements, locations on Federal or Indian land should be identified in 3 columns with Page 1 highlighted. Consult local State or Federal office for specific instructions.

Item 18: Indicate which elevation is used as reference (where not otherwise shown) for depth measurements given in other spaces on this form and in any attachments.

Item 29: "SQA's Cement". Attached supplemental records for this well should show the details of any multiple stage cementing and the location of the cementing tool for each additional interval to be separately produced, showing the completion logs for each interval to be separately produced. These instructions for Items 22 and 24 above.)

Item 33: Submit a separate completion report on this form for each removal to be repaired, processed, or destroyed.
