SUPPLEMENTAL INFORMATION TO FORM 9-331C

JICARILLA APACHE TRIBAL 125 NO. 8 1840' FNL & 1800' FEL, SECTION 26, T25N, R4W RIO ARRIBA COUNTY, NEW MEXICO

The geologic name of the surface formation is the ______ Tertiary San Jose

Estimated tops of important geologic markers and potential water, oil, or gas bearing formations:

FORMATION	DEPTH	ELEVATION
Ojo Alamo	2893 '	4161
Kirtland	3094 '	3960 '
Fruitland	3243 '	3811 '
Pictured Cliffs	3416	3638 '
Chacra (if present)	4286 '	2768 '
Mesaverde Cliff House Point Lookout	5071 ' 5583 '	1983 ' 1471 '
Gallup	6711 •	343 •
Dakota	7591 '	-537 '
TD	7915 •	-861 '

Estimated :	KB	elevation:	7054	_'

Drilling fluid to TD will be a fresh water, low solids non-dispersed mudes system. Open hole logging program will include logs from TD to below surface casing:

- Induction Electric-SP-Gamma Ray Compensated Formation Density-Compensated Neutron-Gamma Ray

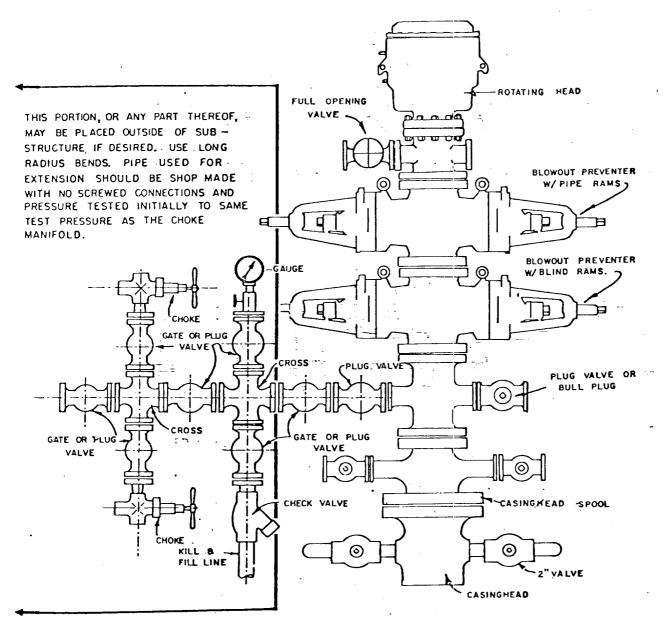

Completion design will be based on these logs. No cores or drill stem tests will be taken.

Operations will commence when permitted and last approximately __4_ weeks.

Amoco's standard blowout prevention will be employed (see attached drawing).

In the past, drilling in this area has shown that no abnormal pressures, temperatures, nor hydrogen sulfide gas will be encountered.

- 1. Blowout Preventers and Master Valve to be fluid operated, and all fittings must be in good condition.
- 2. Equipment through which bit must pass shall be as large as the inside diameter of the casing that is being drilled through.
- 3. Nipple above Blowout Preventer shall be same size or larger than BOP being drilled through.
- 4. All fittings to be flanged.
- 5. Omsco or comparable safety valve must be available on rig floor at all times with proper connection or sub. The I.D. of safety valve should be as great as I.D. of tool joints of drill pipe, or at least as great as I.D. of drill collars.

BLOWOUT PREVENTER HOOKUP

API	Series	#	90 0

OCTOBER 16,1969

Operation of BOP by closing both pipe and blind rams will be tested each trip or, on long bit runs, pipe rams will be closed once each 24 hours.

MULTI-POINT SURFACE USE PLAN

JICARILLA APACHE TRIBAL 125 NO. 8 1840' FNL & 1800' FEL, SECTION 26, T25N, R4W RIO ARRIBA COUNTY, NEW MEXICO

- 1. The attached topographic map shows the proposed route to the location.
- 2. It will be necessary to build an access road approximately 700 feet in length and 20 feet wide. Road to be bar ditched on two sides.
- 3. Existing oil and gas wells within a one-mile radius of our proposed well have been spotted on the lease road map.
- 4. There are two 300-barrel tanks and facilities located at Jicarilla Apache Tribal 125 No. 4, approximately one-half mile west.
- 5. Water will be hauled from Cottonwood Water Hole and Tapacito Wash.
- 6. No construction materials will be hauled in for this location.
- 7. A 125' by 125' pit will be built on location to hold all drilling waste. Upon completion of the well, pit will be fenced and waste and liquids left to dry, then pit will be filled and leveled. If any liquids remain, they will be hauled away prior to back filling.
- 8. There are neither airstrips nor camps in the vicinity.
- 9. The well site layout, reserve, burn and trash pits are shown on the attached Drill Site Specification Sheet. A 5-foot cut will be made on top side of location.
- 10. Restoration of the surface will be accomplished by cleaning up and leveling upon completion of the well. Reseeding of the site will be carried out as instructed by the Bureau of Indian Affairs.
- II. The general topography is a relatively flat area on a sandy slope just west of a low mesa sandstone outcrop. Vegetation consists of sagebrush, rabbit-brush and prickly pear cactus. Juniper and pinon pine are on slopes nearby.

Representatives of the U. S. Geological Survey's Durango Office and the Jicarilla Tribe's Dulce Office inspected the site with Amoco personnel. Cultural resources inspection was conducted by an archaeologist from Salmon Ruins.

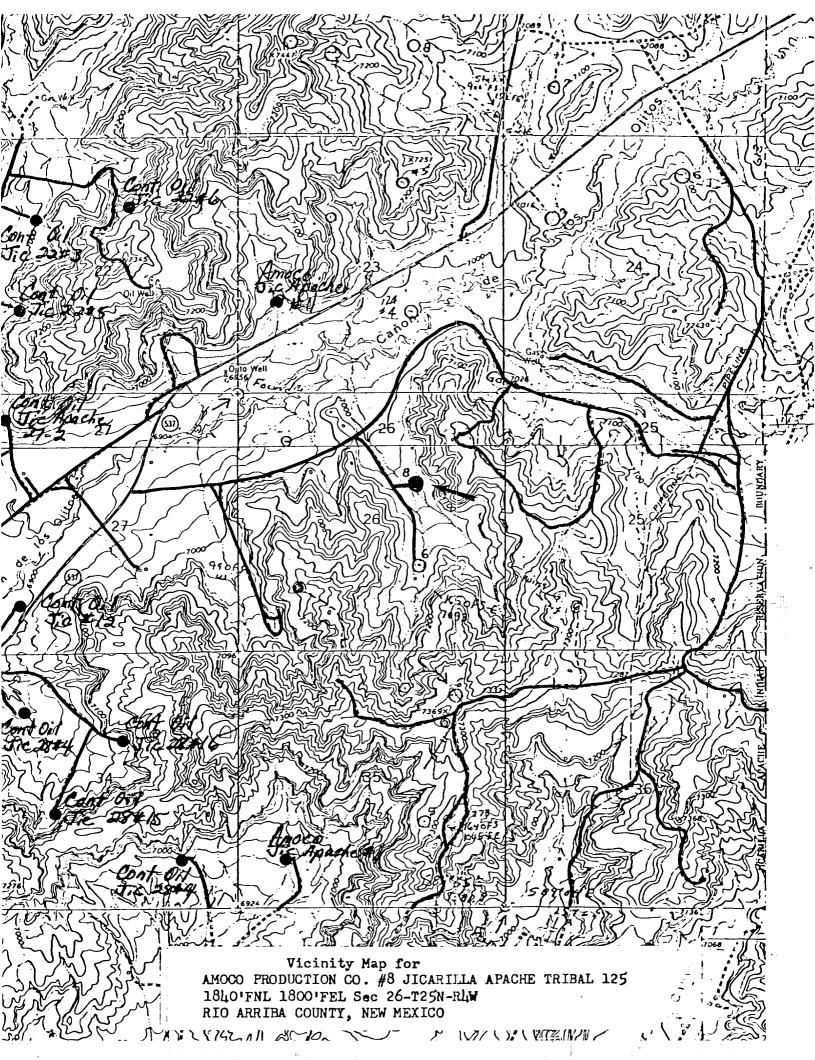

12. Operator's Representative: R. W. Schroeder

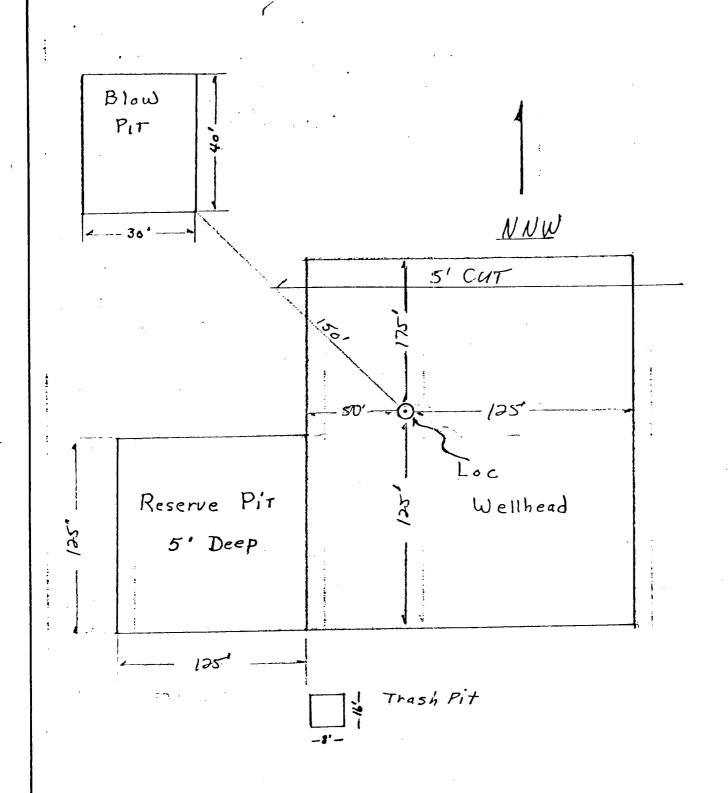

Phone: Office: 505-325-8841; Home: 505-325-6164 Address: 501 Airport Drive, Farmington, NM 87401

Certification: I hereby certify that I, or persons under my direct supervision, have inspected the proposed drillsite and access route, that I am familiar with the conditions which presently exist; that the statements made in this plan are, to the best of my knowledge, true and correct; and, that the work associated with the operations proposed herein will be performed by AMOCO PRODUCTION COMPANY and its contractors and sub-contractors in conformity with this plan and the terms and conditions under which it is approved.
