NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

AMOCO PRODUCTION COMPANY

Lease JICARILLA CONTRACT 145

Well No. 33

Operator

Location of Well: Unit P Sec. 10 Twp. 25

Rge. 5

County RIO ARRIBA

| | NAME OF RESERVOIR OR POOL | TYPE OF PROD. (Oil or Gas) | METHOD OF PROD. (Flow or Art Linn) | PROD MEDIUM (Bog. or Cog.) |
|------------------|---------------------------|-------------------------------|---------------------------------------|-------------------------------|
| Upper Completion | CHACRA | GAS | FLOW | TBG |
| Lower Completion | MESAVERDE | GAS | FLOW | TBG |

PRE-FLOW SHUT-IN PRESSURE DATA

| Upper Completion: | Hour, date shut-in | Length of time shut-in | SI press. psig | Stabilized? (Yes or No) |
|-------------------|--------------------|------------------------|----------------|-------------------------|
| | 10-4-87 | 5 days | 500 | YES |
| Lower Completion | Hour, date shut-in | Length of time shut-in | SI press. psig | Stabilized? (Yes or No) |
| | 10-4-87 | 3 days | 10 | YES |

FLOW TEST NO. 1

| Commenced at hour, date)* | | PRESSURE | | Zone producing (Upper or Lower) | REMARKS |
|---------------------------|-----------------------|------------------|------------------|---------------------------------|-----------------|
| TIME (hour, date) | LAPSED TIME SINCE* | Upper Completion | Lower Completion | PROD. ZONE TEMP. | |
| 10/4/87 | Day 1 | 498 | 10 | | Both zones SI |
| 10/5/87 | Day 2 | 499 | 10 | | Both zones SI |
| 10/6/87 | Day 3 | 499 | 10 | | Both zones SI |
| 10/7/87 | Day 4 | 500 | 10 | | Both zones SI |
| 10/8/87 | Day 5 | 310 | 10 | | upper zone Flow |
| 10/9/87 | Day 1 | 233 | 10 | | upper zone Flow |

Production rate during test

Oil: _____ BOPD based on _____ Bbls. in _____ Hours. _____ Grav. _____ GOR _____

Gas: _____ MCFPD; Tested thru (Orifice or Meter): _____

MID-TEST SHUT-IN PRESSURE DATA

| Upper Completion: | Hour, date shut-in | Length of time shut-in | SI press. psig | Stabilized? (Yes or No) |
|-------------------|--------------------|------------------------|----------------|-------------------------|
| Lower Completion | Hour, date shut-in | Length of time shut-in | SI press. psig | Stabilized? (Yes or No) |

Base 10-21-87

NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packet leakage test shall be conducted on each multiply completed well within seven days after initial completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be conducted on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
 2. At least 72 hours prior to the commencement of any packet leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operations shall also be so notified.
 3. The packet leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in until the well-head pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.
 4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packet leakage test, a gas well is being flared to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.
 5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
 6. Flow Test No. 2 shall be conducted even though no test was indicated during Flow Test No. 1, if the operator desires to do so. The second Flow Test No. 1 cannot be conducted unless the first Flow Test No. 1 has been completed.

that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.

 7. Pressures for gas-zone tests must be measured on each zone with a dead-weight gauge at time intervals as follows: 3 hour tests: immediately prior to the beginning of each flow-period, at fifteen-minute intervals during the first hour thereof, a hourly intervals thereafter, including one pressure measurement immediately prior to conclusion of each flow period; 2-day tests: immediately prior to the beginning of flow period, at least one time during each flow period (at approximately the n point) and immediately prior to the conclusion of each flow period. Other pressure be taken as desired, or may be requested on wells which have previously shown unusual test data.
 8. 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which is checked at least twice, once at the beginning and once at the end of each test, a dead-weight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the testing gauge shall be required on the oil zone only, with deadweight pressures as follows being taken on the gas zone.
 9. The results of the above-described tests shall be filed in triplicate within 15 days of completion of the test. Tests shall be filed with the Area Director Office of the New Mexico Oil Conservation Division on Northwest New Mexico Packet Leakage Test Form F-10-01-78 with all dead-weight pressures indicated therein as well as the temperatures (gas zones only) and gravity and GOR (full zones only).
