If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Cotton is currently evaluating production performance of the Dakota Formation before moving up hole to the Gallup Formation in the Apache #134. We are trying to gather reservoir production data on the Dakota and Gallup Formations individually. Pressure build-up tests are being conducted in the Dakota on the Apache 116 & the Apache 119 now. Plans are to run pressure tests in the Gallup on the Apache 116 & the Apache 119 in the near future. Results from these tests will be used to determine the completion designs for the Gallup on the Apache 134.
