Gentlemen:

I have examined the application dated 11-9-81
for the Seth Oil Co. Jimilla C #14E D-27-25N-5W
Operator Lease and Well No. Unit, S-T-R

and my recommendations are as follows:

Approve. Require monthly tests of one zone

Yours truly,

Frank T. Darg

Getty Oil Company | P.O. Box 3360, Casper, Wyoming 82602-3360

Re: Request for Administrative Approval
Surface Commingling
Jicarilla "C" No. 14E
NW/4, NW/4 Sec. 27-T25N-R5W
Rio Arriba County, New Mexico

Dear Sir:

Getty Oil Company respectfully requests Administrative approval to surface commingle production from the Basin Dakota and Otero Gallup formations in the subject well.

Without surface commingling, production from the Dakota zone will have to go through a production unit to separate the oil and gas so that the gas may be metered and sold to El Paso Natural Gas' 250 psi sales system. The Dakota zone in this well has a 7 day shut-in tubing pressure of only 540 psig and a CAOF of only 298 MCFD.

However, the Gallup zone in this well will produce to a central battery and the Gallup gas will be sold through our existing compressor system. Tying our Dakota production into our existing Gallup flowline will allow us to produce into a 50 psi system instead of El Paso's 250 psi system. We feel that this move will result in the recovery of additional oil and gas which would not otherwise be recovered.

Of course, each zone will have its own bypass manifold which will allow the hookup of a test separator so that each zone may be tested individually before the point of commingling.

If further information is required before a decision can be made on this request, please feel free to contact this office.

Sincerely,

For D. W. Bowers
Area Superintendent
