3162.3-2 (7100)

Questar rigged up a workover rig on the referenced well the first week of November, 1999. After stripping out the tubing and rods, the well was swab tested. After two days of swabbing, it was decided to put the well on pump and pump test it for seven days. Based on commercial production during the seven day test, Questar will return this well to a producing status in accordance with BLM and state guidelines. The gas was vented during this pump test and the oil stored on location in a tank.
