Basin Fruitland Coal Pool

Dear Mr. Chavez,

We are writing to request your approval to vent a small amount of natural gas from the subject well (as provided by Rule 10 of the Basin Fruitland Coal Pool Rules) that may be produced during our efforts to establish whether or not a pipeline connection can be justified. We are fairly close (within 1,000') to a gas gathering system operated by Elmridge Resources and plan to connect our well for gas sales as soon as there is sufficient gas volumes to do so. The Fruitland Coal at 2,108'-2,116' has been completed, and rod pump artificial lift equipment installed. Currently it is necessary to use propane for the pumping unit engine, as there is not enough natural gas to supply the fuel.

Should you have questions or need additional information, please let me know.

Sincerely,

John D. Roe
