13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Numerous attempts have been made to establish production from this well. The Fruitland Coal interval is plugged with what appears to be shale cuttings. The well has good shut-in pressure (422 psi). Request continued shut-in while a procedure to correct the problem is devised. Availability of equipment hampers our ability to spend the time necessary to repair the problem. If a solution is not found, plan to plug this well and re-drill in the same spacing unit.
