DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate casing jobs cementing points, and all other important proposed work)

Present total depth 3825'. 13-3/8" OD 48# H-40 surface casing set at 306' NKB with 350 sacks cement. Well was temporarily abandoned July 15, 1962. It is proposed to move in rotary tools and deepen well to the Dakota Formation at a projected total depth of approximately 8200', or production at a shallower depth. 7-5/8" OD 29.7# intermediate casing will be cemented at approximately 6000' with 250 sacks. 4-1/2" OD 11.6# J-55 production casing will be cemented at total depth with 250 sacks. If commercial production is indicated, the producing section will be sand-oil fractured.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
