DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill with rotary tools to 7000 feet to that the Dakota sandstone. We propose to cement 300 feet of 8 5/8 inch surface casing. If oil or gas production is indicated in the Dakota sandstone we propose to cement 6 1/2 inch production casing at the total depth.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
