(State or Territory)

The elevation of the derrick floor above sea level is 7499 ft. (RDB)

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs; cementing points, and all other important proposed work)

As a result of not obtaining gas in commercial quantities, we propose to plug and abandon the Jicarilla Apache "A" 118 No. 4 as follows:

1. Pump 15 sacks cement plug on bottom (about 50-100' of fill up) and squeeze with minimum pressure.
2. Fill hole with fluid.
3. Pump 20 sacks cement down 8-5/8" - 4-1/2" annulus (about 100' fill).
4. Cut off well head, spot 5 sacks cement surface plug (0-60'), erect abandonment marker and clean up location.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
