Well No. 6 is located 1650 ft. from S line and 1650 ft. from E line of sec. 28
NW SE Sec. 28 T26N R5W _____
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
South Blanco P.C. Rio Arriba New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6698 ft., estimated.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The Ohio Oil Company requests permission to pull as much 7" casing as possible and plug and abandon the above well.

The last work done on this well was 2/1/56 and has been carried as temporarily abandoned since that time. We were unable to produce this gas well in commercial quantities.

The hole will be filled with mud at all times. The Ohio Oil Company proposes to set a 25 sack cement plug at total depth and a 10 sack plug at every cutoff until casing is free. We will then run a 25 sack plug at casing stub. We will also run a 25 sack plug at bottom of surface pipe and a 5 sack plug at top of well, and set a dry hole marker.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
