DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We proposed to mud drill with rotary equipment to approximately 7790' to test the Dakota formation. The following casing and cementing program will be used:

10-3/4" 32.75# H-40 Seamless Casing to 250' cemented top to bottom
5 1/2" OD 15.5# J-55 Seamless casing from 0 to 6790 approximately and
5 1/2" OD 17.0# J-55 Seamless casing from 6790 to approximately 7790'.
The 5 1/2" casing will be cemented with 200 sacks around the shoe and with
100 sacks thru a multiple stage cementing collar at approximately 3250'.

Casing will be perforated in the Dakota sand and the well sand/water fractured to obtain the best possible completion.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
