OIL CON. COM.

The elevation of the derrick floor above sea level 6663 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

Packer leakage tests made 7-1-60 thru 7-24-60 indicated communication between Mesa Verde and Greenhorn zones. On September 16 and 17 the 1" tubing and Otis choke separating these two zones were pulled, repaired and re-run to 5153. Tests made September 18 indicate that the zones are now satisfactorily separated. New deliverability and packer leakage tests as required by State of New Mexico, will be made soon as possible.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
