The elevation of the **surface** above sea level is **5241** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was completed as a dual Mesaverde - Pictured Cliffs on 10/37/57. The Mesaverde was found to be sub-commercial and was temporarily abandoned. Due to a production packer leak, it is necessary to abandon or repair. It is believed the original Pictured Cliffs frac was ineffective. Therefore, it is proposed to abandon the Mesaverde and re-frac the Pictured Cliffs as follows:

1. Kill Mesaverde & Pictured Cliffs with water.
2. Pull Pictured Cliffs tubing. Pull Mesaverde tubing. If Mesaverde tubing not free, chemically cut tubing 90' to 100' above nearest free point and pull tubing from cut.
3. Run retrievable cementer and set at 4700'±. Squeeze with sufficient cement to fill 5" liner to above 5250' or 90' above tubing sub, whichever (See reverse of form)

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Plan of recompletion of Pictured Cliffs Zone - continued.

is higher.

4. UOC, no-run retrievable cementer and press, test plug to 1500 psi.
5. Set 1-1/2" bridge plug on top of liner at 3762'. Pump 5 sack class "A" cement with 36 cc/gal on top of bridge plug. Top of cement to be at 3762'. Press, test plug to 3760 psi.
6. Perforate Pictured Cliffs and sand-water frac.
7. Shut well in with pressure stabilizer. Run tubing, clean up and potential.
