Re: Application for Dual Gas Completion of
Northwest Production Corporation Well
No. 7-8, located in Section 8, T 26 N,
R 4 W.

Attention: Mr. A. L. Porter

Gentlemen:

In accordance with Rule 112-C of the Commission Rules and Regulations, Northwest Production Corporation requests final approval for the dual completion of Well No. 7-8 in the Mesaverde and Pictured Cliffs gas formations. Tentative approval of the plan for drilling and equipping the well was received from Mr. Emory C. Arnold on July 2, 1956. Approval from the United States Geological Survey was received June 26, 1956 on the Notice of Intention to Drill a dual Mesaverde-Pictured Cliffs well.

Following is a resume of the work performed on Well No. 7-8 which is located 1190 feet from the North line and 1190 feet from the East line of Section 8, T 26 N, R 4 W, Rio Arriba County, New Mexico:

1. Seven inch intermediate casing was set at 4120.22 feet.
2. A 6- $\frac{1}{4}$ inch hole was drilled to 6216 feet and a 5-inch liner was cemented at total depth. Top of the liner was hung at 4006 feet with a Burns liner hanger.
3. The 5-inch liner was perforated from 6104 to 6168 feet and the lower Point Lookout was fractured.
4. A bridge plug was set at 6097 feet, the 5-inch liner was perforated from 6076-6090 and the middle Point Lookout was fractured.
5. A bridge plug was set at 6070 feet, the 5-inch liner was perforated from 6030-6064 and the upper Point Lookout was fractured.
6. A bridge plug was set at 5770 feet, the 5-inch liner was perforated from 5600-5680 and the lower Cliff House was fractured.
7. A bridge plug was set at 5592 feet, the 5-inch liner was perforated from 5548-5584 and the upper Cliff House was fractured.
8. The bridge plugs were drilled out and the well cleaned out to 6200 feet.

Re: Application for Dual Gas Completion of
West Production Corporation Well
No. 7-8, located in Section 8, T 20 N,
R 11 W.

Attention: Mr. A. L. Foster

Gentlemen:

In accordance with Rule 118-C of the Commission Rules and Regulations, North-
west Production Corporation requests final approval for the dual completion
of Well No. 7-8 in the Mesavieja and Pineda Cliffs gas formations. Final
approval of the plan for drilling and equipping the well was received
from Mr. Henry C. Arnold on July 5, 1956. Approval from the United States
Geological Survey was received June 26, 1956 on the Notice of Intention to
Drill a dual Mesavieja-Pineda Cliffs well.

Following is a resume of the work performed on Well No. 7-8 which is located
1190 feet from the North line and 1190 feet from the East line of Section 8,
T 20 N, R 11 W, Rio Arriba County, New Mexico:

1. Seven inch intermediate casing was set at 4130.25 feet.
2. A 6-1/2 inch hole was drilled to 6115 feet and a 5-inch liner was
cemented at total depth. Top of the liner was hung at 4045 feet
with a brass liner hanger.
3. The 5-inch liner was perforated from 6104 to 6155 feet and the
lower point lookout was fractured.
4. A bridge plug was set at 6097 feet, the 5-inch liner was perforated
from 6076-6099 and the middle point lookout was fractured.
5. A bridge plug was set at 6070 feet, the 5-inch liner was perforated
from 6030-6081 and the upper point lookout was fractured.
6. A bridge plug was set at 5770 feet, the 5-inch liner was perforated
from 5600-5680 and the lower cliff house was fractured.
7. A bridge plug was set at 5598 feet, the 5-inch liner was perforated
from 5548-5584 and the upper cliff house was fractured.
8. The bridge plugs were drilled out and the well cleaned out to 5600
feet.

9. A Bridge plug was set at 4160 feet, the 7-inch casing was perforated from 3884-3916 feet and the Pictured Cliffs was fractured.
10. The bridge plug was drilled out and the well cleaned out to 6200 feet.
11. Two-inch EUE tubing was hung at 6114.93 feet, a production packer was set at 5492.99 feet and a tubing side-door choke at 5453.47 feet. The well was completed August 7, 1956.

The three-hour absolute open flow for the Pictured Cliffs tubing-casing annulus completion was 7,155 Mcf per day taken on September 17, 1956, and for the Mesaverde tubing completion was 2,990 Mcf per day taken on October 1, 1956.

Attached for your information is a diagramatic sketch of the dual with pertinent data of the completion. Test data, including the Packer Leakage Test with charts and a Packer Setting Affidavit are also attached.

Honolulu Oil Corporation, owner of mineral rights on offset acreage, has advised that company has no objection to the dual completion, as evidenced by the attached letter.

Should you desire additional information before a formal order approving the dual completion is issued, please advise.

Yours very truly,

NORTHWEST PRODUCTION CORPORATION
