DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We propose to drill a well at the location described above to a depth of approximately 6700' to test the Tociito sand. We propose to use rotary drilling equipment with the following casing program:

10-3/4" - 32.75# H-40 Casing set at 450' and cemented top to bottom.
7" - 23# - J-55 Casing set at approximately 6700' and cemented from shoe to top of Cliff House sand.

Casing will be set through the Tociito sand and perforated. The sand will be fractured if necessary to obtain an efficient rate of production.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

Company Caulkins Oil Company
