DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

After perforating 2597-48 with 2 joints per foot, hole caved so badly, the 1 1/2" liner was run and landed at 2573 feet. Two open hole packers were run on the 1 1/2" liner and set at 2623 and 1795 feet. Perforated with 2 joints/ft., selected intervals 2670-2720 feet. Fracture treated formation with 900 barrels grade oil, no sand, and 1000 lbs. worth balls. Total land oil to recover, including land oil used to log well, 1109 barrels land oil. Run 2648 feet of 2-3/8" tubing. Run pump and rods. Flashed well on pump, 7-19-60. Now recovering land oil. Lost 731 barrels land oil.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
