Re: S.F. 080312-A

Attn: Mr. C. N. Segnar

Gentlemen:

Your letter of November 21, 1962 in answer to our letter of Oct. 2, 1962 requests permission to leave your well No. 1 Intex 5 completed as it is, or to allow you additional time in which to produce the Gallup and Sanostee zones before being required to plug off the Greenhorn and Graneros zones. We can not agree with you that cavings form an effective plug, however, the N.M.O.C.C. and the U.S.G.S. have agreed to allow you a reasonable length of time in which to check the producing capabilities of the zones now being produced. The time allowed will be from 3 to 6 months depending on the behavior of the well under sustained production and, of course, weather and road conditions in the area in which the well is located.

Very truly yours,

(Orig. Sgd.) P. T. McGRATH

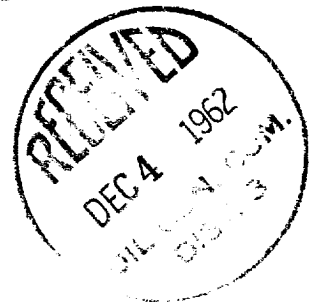

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The number of transformed cells was determined by the number of colonies obtained on the selective medium. The results are the mean of three independent experiments. Error bars represent standard deviation.

1. *Phragmites australis* (Cav.) Trin. ex Steud.

1. The first of the four main points of the 1948 Declaration of the Rights of the Child is that the child is the subject of special care and attention. This is because the child is not yet able to take care of himself and is therefore dependent on others. The Declaration states that the child should be given the best possible care and attention, and that the child should be able to develop his or her personality fully.
