

OIL CONSERVATION COMMISSION

STATE OF NEW MEXICO 1000 RIO BRAZOS RD. - AZTEC

87410

August 7, 1975

I. R. TRUJILLO CHAIRMAN

LAND COMMISSIONER
PHIL R. LUCERO
MEMBER

STATE GEOLOGIST
- A. L. PORTER, JR.
SECRETARY - DIRECTOR

Mr. Charles Werner Northwest Production Corp. 202 Petroleum Club Plaza Farmington, New Mexico

Re: Jicarilla 119 N #4, H-6-26N-4W

Dear Mr. Werner:

The attached packer-leakage test report for the subject well indicates communication between the producible zones.

You are hereby directed to take immediate action to cause the well to comply with Rule 112-a, Section VI and the order authorizing the dual completion.

If there are questions, please contact us.

Yours very truly,

A. R. Kendrick

Engineer, District #3

- 1. A prover is also restricted all be a considerate modified we involve a consideration of the constraint of the constra
- At least 72 hours prior to the commencement of any packer leakage test, the operator shall metify the Commission in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.
- 3. The packer lookens tent shall commence when both zones of the duml cospletion are shut-in for pressure stabilization. Both zones shall reach shut-in until the well-beau pressure in each has stabilized, provided however, that they need not remain shut-in more than seven days.
- 4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: If, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.
- 5. Following completion of Flow Test No. 1, the well shall again be shut-in. in accordance with Paragraph 3 above.
- 6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.

7. Its and in governor tests until the correct or each year of the deficient of a complex of the test countries. In the first for each flow period or either a factor of the latter of the deficient of the first form of each flow period. Other pressures may be taken as desired, or may be requested on walls which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges, the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as required above being taken on the gas zone.

8. The results of the above-described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Aziec District Office of the New Mexico Oil Conservation Commission on Northwest New Mexico Dacker Leakage Test Form Revised 11-1-58, with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only). A pressure versus time curve for each zone of each test shall be constructed on the reverse side of the Packer Leakage Test Form with all deadweight pressure points taken indicated thereon. For oil zones, the pressure curve should also indicate all key pressure changes which may be reflected by the recording gauge charts. These key pressure changes should also be tabulated on the front of the Packer Leakage Test Form.

In while the zone which was previously	٢	a. , , , ,
