Well No. 5 is located 1450 ft. from N line and 1450 ft. from E line of sec. 4
NE 1/4 Sec. 4 26N 4W 14N
 (4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Tasapito Rio Arriba New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 7230 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

This well was drilled to a total depth of 4160' in the Pictured Cliff Formation. The 5-1/2" casing was set at 4160 and cemented with 300 sac. The Pictured Cliff formation was perforated and sand-water freed. The small amount of gas the well is capable of producing is non-commercial. It is now proposed to deepen this well to the Mesa Verde with rotary tools. The Mesa Verde is expected at plus or minus 5500'. If gas is obtained in the Mesa Verde a 4" liner will be set through the Mesa Verde. The Mesa Verde formation will be perforated and sandfreed. A dual completion will be made in the Pictured Cliff and Mesa Verde formations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operation may be commenced.
