

- 12/4/66 Set Baker NC bridge plug at 7306 with Schlumberger wire line. Pumped 15 BPM at 2000 psi down casing, BP leaking. Ran "WASP" BP, stopped at 6900', apparently Baker BP traveled up when well was flowed for few minutes to confirm leaking BP, pushed down to 7308. Set "WASP" at 7302. Pressure tested casing to 4500 psi. Held OK.
- Perforated upper Dakota 7154-58, 7279-82, 7286-90, 7292-95; total of 14' with 28 Schlumberger Hyper Jets, 2 holes per foot. Well kicked when zone 7279-95 was perforated. Sand fractured upper Dakota perforations 7154-7295 down 4 1/2" casing by Dowell. 500 gal. Mud acid ahead, mixed 60000# 20-40 sand at 1/2 to 1 1/4# per gal. with water, 4800 to 3300 psi, 40-51 BPM, displaced with 130 bbl. water at final pressure of 3600 psi, 48 BPM. Immediate SIP 1700 psi. 4191 mHP used.
- Set Baker NC cast iron BP at 4800 with Schlumberger wire line. Pressure tested casing to 4500 psi, held OK. Perforated Cliff House Mesaverde sand 4688-4708, 20' with 80 Schlumberger Hyper Jets, did not kick after perforating. Set Baker Retrievmatic packer (open end) in 4 1/2" casing at 4658'.
- 12/6/66 Swab tested Cliff House perforation, fluid level at 400', swabbed from bottom 4658, no fillup.
- 12/8/66 Ran swab, found 100' fillup, water, swabbed down to bottom. Pumped 1000 gals. 15% Dowell BDA acid into perforations 4688-4708, displaced with 18 1/2 bbl. water. Immediate SIP 900 psi. Swabbed down, water and acid water recovered, swabbed tubing dry. Some gas fumes.
- 12/9/66 Well dead, filled tubing with water, unseat packer. Set Baker Retrievmatic packer at 4373'. Pressured annulus to 1000 psi. Cement squeezed perforations 4688-4708, by Halliburton, with 100 sacks class C cement containing 0.8% Halad 9 fluid loss additive. Estimated cement top 4600. Pressure leveled at 600 psi. Pulled packer.
- 12/10/66 Tagged top of cement at 4520. Pressure tested to 2000 psi, held 15 min. OK. Drilled cement to 4755, pumped water down casing at 3/4 BPM, 2000 psi, 47' of cement below perforation 4688-4708, indicated that BP at 4800' leaked during squeeze. Hard cement at 4755. Pressure read by Halliburton.
- 12/11/66 Ran Baker Roto-Vert casing scraper to 4755, pulled scraper. Set Baker Retrievmatic Packer at 4750. Pressured to 2000 psi on tubing and below packer at 4750, held 15 min. OK. Set retrievmatic packer at 4370, pressured annulus to 1000 psi, pumped water into perforations 4688-4708 at 2 BPM, 2100 psi. Mixed 100 sacks class C cement (containing 0.8% Halad 9 fluid loss additive and 2% CaCl2) at 2100 to 1700 psi. Pressured up to 3100 psi, held OK, pulled packer.
- 12/12/66 Pulled mill and ran new 3 3/4" mill. Drilled 4555-4688 hard cement; 4688-4744 void; 4744-4752 soft cement. Pressured 2200 psi 15 min. Held OK. Drilled soft cement 4752-4758; 4758-4800 void, tagged bridge plug (Baker NC cast iron) at 4800'. Circulated hole. Drilled top of BP at 4800', well flowed water and gas out of bleed line. Drilled on lower part of BP, pulled mill, worn bald. Drilling on BP with 3 7/8" bit, drilled through. Pushed down to 7295, drilled remainder of BP, cleaned out sand; drilling BP at 7302.
- 12/14/66 Quit drilling, cone off bit.
- 12/15-16/66 Fishing for cone, milling on iron.
- 12/17/66 Pushed plug down to 7387, pulled mill, pieces of cast iron and magnesium in junk basket. Cleaned out to 7470 AB.

The American Medical Association is a non-profit corporation organized for the purpose of promoting the interests of the medical profession and the public. It is the largest and most influential organization of its kind in the world.

The Association is composed of more than 50,000 members, including physicians, dentists, nurses, and other health workers. It is organized into a hierarchy of local, state, and national associations, each with its own specific interests and concerns.

The Association's primary concern is the advancement of the medical profession and the improvement of the health of the public. It does this through a variety of activities, including the publication of journals, the holding of conferences, and the advocacy of legislation.

The Association is also involved in a wide range of other activities, including the promotion of research, the development of standards, and the provision of services to the public.

The Association's activities are carried out through a variety of departments and committees, each with its own specific responsibilities. These include the Department of Education, the Department of Legislation, and the Department of Public Relations.

The Association's activities are also carried out through a variety of other organizations, including the American Medical Students Association, the American Medical Nurses Association, and the American Medical Association of Women.

The Association's activities are also carried out through a variety of other organizations, including the American Medical Association of Physicians, the American Medical Association of Dentists, and the American Medical Association of Nurses.

The Association's activities are also carried out through a variety of other organizations, including the American Medical Association of Physicians, the American Medical Association of Dentists, and the American Medical Association of Nurses.
