Re: NMOCC Order R-5707, Downhole Commingling
Jicarilla C #5
Sec. 24, T26N, R5W, Rio Arriba, NM

Gentlemen:

The Blanco Mesa Verde and Basin Dakota formations were commingled in the Jicarilla C #5 well on October 16, 1978, as allowed by Commission Order R-5707. Production from the well during the period 11/14--11/20 appears relatively stable at 450 MCFD, 2.5 BOPD. Dakota production for November should be 273 MCFD, 2.5 BOPD, based on past production decline.

It is suggested that 60% of the composite gas stream be attributed to the Dakota formation, and 40% to the Mesa Verde formation. As oil production does not appear to have increased, it is recommended that all liquid hydrocarbons be attributed to the Dakota. A production curve for the Dakota is enclosed, with the commingled rate indicated.

Please contact us if you require additional information.

Sincerely yours,

TENNECO OIL COMPANY
