Re: Delinquent Packer Leakage Tests 1985

Gentlemen:

This office did not receive 1985 packer leakage tests on the below listed well/wells. Annual tests on all non/down-hole commingled multiple completions are required in north western New Mexico.

You are hereby directed to schedule and test these wells within 60 days of this date. These tests will serve as 1985 tests, and 1986 tests are to be ran at a later date.

If you have any questions, please contact this office.

1. The first step in the process of creating a new product is to identify a market need. This involves conducting market research to determine what consumers want and need. Once a market need is identified, the next step is to develop a concept for a product that meets that need. This involves brainstorming ideas and selecting the most promising one. The third step is to create a prototype of the product. This involves building a small-scale model of the product to test its feasibility. The fourth step is to conduct a feasibility study. This involves evaluating the product's potential for success in the market. The fifth step is to develop a business plan. This involves outlining the product's marketing, sales, and financial strategies. The sixth step is to secure funding. This involves raising capital to develop and launch the product. The seventh step is to launch the product. This involves introducing the product to the market and monitoring its performance. The eighth step is to evaluate the product's success. This involves analyzing sales data and customer feedback to determine if the product is meeting its goals. The ninth step is to make improvements. This involves identifying areas for improvement and implementing changes. The tenth step is to continue to monitor the product's performance. This involves ongoing evaluation and adjustment to ensure the product remains successful in the market.
