13. Describe Proposed or Completed Operations

It is intended to recomplete the subject well from the Gallup and Dakota formations to the Mesaverde formation according to the following procedure:

TOOH with Gallup/Dakota tubing. TIH with cement retainer and set 50 feet above the top of the Gallup perforations. Squeeze with two times the cement volume to fill the casing from total depth to the cement retainer (100% excess). Perforate and fracture treat the Point Lookout interval. Set a retrievable bridge plug above the Point Lookout. Perforate and fracture treat the Cliff House and Menefee intervals. Clean out all intervals and test potential. Run tubing. Return the well to production as a Mesaverde single.

14. I hereby certify that the foregoing is true and correct.
