13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Operator is currently having an independent reserves calculation done to determine the remaining Dakota reserves and possible Gallup reserves. If sufficient reserves are present, then it is planned to take a bottomhole pressure, to determine gradient, pressure, and fluid level. We would propose to determine if pumping those wells will produce gas in paying quantities in the current market.

If the wells will not produce from the Dakota in paying quantities they will be evaluated for recompletion in the Gallup pending the results of the ongoing reserves evaluation.

The reserves evaluation is expected to be completed by early 1991.
