13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

It is proposed to change this well to long term shut-in status.

This well is in an area where McHugh has studied the Gallup zone and proposed a recompletion of a well from the Dakota to the Gallup. If the recompletion of the other well is successful, this well will be a candidate for a similar re-completion.

It is requested this well be approved for the long term shut-in status for the following reasons:

1. The well is currently unable to buck line pressure.
2. The well is unable to produce in paying quantities under current market conditions.
3. The well has additional reserves and has the potential to produce again if market conditions and/or line pressures change.
4. More time is needed to evaluate the success of the offset completion.
