CONDITION OF APPROVAL, if any:

PLUG AND ABANDONMENT PROCEDURE

6/4/01

Canyon Largo Unit #247

Ballard Pictured Cliffs

AIN #4427501

1450' FNL & 820' FEL, Section 27, T25N, R7W

Rio Arriba County, New Mexico API #30-039-20896

Lat: 36 - 22.4778' / Long: -107 - 33.2874'

Note: All cement volumes use 100% excess outside pipe and 50' excess inside pipe. The stabilizing wellbore fluid will be 8.3 ppg, sufficient to balance all exposed formation pressures. All cement will be ASTM Type II, mixed at 15.6 ppg with a 1.18 cf/sx yield.

1. Install and/or test rig anchors. Prepare blow pit. Comply with all NMOCD, BLM and Burlington safety rules and regulations. ND wellhead and NU BOP, test BOP. Prepare and tally 1-1/4" tubing workstring. Round-trip 2-7/8" gauge ring or casing scraper to 2610'.
2. **Plug #1 (Pictured Cliffs perforations and Fruitland, Kirtland and Ojo Alamo tops, 2610' - 1825'):** Set a 2-7/8" wireline CIBP at 2610'. TIH with open ended tubing and tag CIBP. Load casing with water and circulate the well clean. Pressure test casing to 500#. If casing does not test, then spot or tag subsequent plugs as necessary. Mix 24 sxs cement (in two 12 sx stages) and spot a balanced plug inside casing above the CIBP to isolate the Pictured Cliffs perforations and to cover though the Ojo Alamo top. TOH with tubing.
3. **Plug #2 (Nacimiento top and 8-5/8" Surface casing, 320' - surface):** Perforate 2 or 3 bi-wire squeeze holes at 320'. Establish circulation out bradenhead valve. Mix and pump approximately 110 sxs cement down 2-7/8" casing to circulate good cement out bradenhead valve. Shut well in and WOC.
4. ND BOP and cut off casing below surface. Install P&A marker with cement to comply with regulations. RD, move off location, cut off anchors and restore location.
