## NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator Amoco Production Company Lease Jic Apache 102 Well No. 8 PPF  
 Location of Well: Unit I Sec. 3 Twp. 26 Rge. 4 County Rio Arriba

	NAME OF RESERVOIR OR POOL	TYPE OF PROD. (Oil or Gas)	METHOD OF PROD. (Flow or Art. LIII)	PROD. MEDIUM (Tbg. or Cog.)
Upper Completion	Mesq Verde	Gas	Flow	Tbg
Lower Completion	Dakota	Gas	Flow	Tbg

## PRE-FLOW SHUT-IN PRESSURE DATA

Upper Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
	8-14-88	5 days	485	yes
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
	8-14-88	3 days	1135	yes

## FLOW TEST NO. 1

Commenced at (hour, date)*		PRESSURE		Zone producing (Upper or Lower)	REMARKS
TIME (hour, date)	LAPSED TIME SINCE*	Upper Completion	Lower Completion	PROD. ZONE TEMP.	
8-14-88	Day 1	265 / 430	1135		Both zones SI
8-15-88	Day 2	435 / 455	1135		Both zones SI
8-16-88	Day 3	465 / 480	1135		Both zones SI
8-17-88	Day 4	485 / 500	1135		Both zones SI
8-18-88	Day 5	500 / 525	900		Lower zone Flow
8-19-88	Day 6	548 / 550	740		Lower zone Flow

## Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. In \_\_\_\_\_ Hours. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR \_\_\_\_\_

Gas: \_\_\_\_\_ MCFPD; Tested thru (Orifice or Meter): \_\_\_\_\_

## MID-TEST SHUT-IN PRESSURE DATA

Upper Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

(Continue on reverse side)

## NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

f'ce

## **FLOW TEST NO. 2**

### Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. in \_\_\_\_\_ Hours. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR \_\_\_\_\_

Gas: \_\_\_\_\_ MCFPD: Tested thru (Orifice or Meter): \_\_\_\_\_

**Remarks:** \_\_\_\_\_

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

## **NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS**

1. A packer leakage test shall be conducted on each multiply completed well within seven days after actual completion of the well, and annually thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be commenced on all multiple completions within seven days following recompletion and/or chemical or fracture treatment, and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
  2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be commenced. Offset operators shall also be so notified.
  3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilisation. Both zones shall remain shut-in until the well-head pressure in each has stabilised, provided however, that they need not remain shut-in more than seven days.
  4. For Flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shut-in. Such test shall be continued for seven days in the case of a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flared to the atmosphere due to the lack of a pipeline connection the flow period shall be three hours.
  5. Following completion of Flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
  6. Flow Test No. 2 shall be conducted even though no leak was indicated during Flow Test No. 1. The procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1 except

that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.

  7. Pressures for gas-zone tests must be measured on each zone with a dead-pressure gauge at time intervals as follows: 3 hour tests: immediately prior to the beginning of each flow-period, at fifteen-minute intervals during the first hour thereof, a hourly intervals thereafter, including one pressure measurement immediately prior to conclusion of each flow period. 7-day tests: immediately prior to the beginning of flow period, at least one time during each flow period (at approximately the mid-point) and immediately prior to the conclusion of each flow period. Other pressure be taken as desired, or may be requested on wells which have previously shown variable test data.
  8. 24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which is checked at least twice, once at the beginning and once at the end of each test, a dead-weight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressures as recorded above being taken on the gas zone.
  9. The results of the above-described tests shall be filed in triplicate within 11 days of completion of the test. Tests shall be filed with the Asset District Office of the New Mexico Oil Conservation Division or Northern New Mexico Packer Leakage Test Form F-10-01-78 with all dead-weight pressures indicated therein as well as the surface temperatures (gas zones only) and gravity and GOR (oil zones only).
