	Other <input checked="" type="checkbox"/> Squeeze off PC perfs
	Dispose Water
	(Note: Report results of multiple completions on Well Completion or Recompletion Report and Log Form.)

Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

The Gavilan Pictured Cliffs was perforated, fraced, and production tested. Due to the high water volume production, this well is not economic to produce. MW Petroleum proposes to cement squeeze off the perfs, pressure test the casing with water to 500 PSI, and return the well to Gavilan Mancos production.

As per telephone conversation w/ Robert Kent on 3-22-94.
