Re: Jicarilla H #8E
1850' FNL & 1650' FEL
Section 19, T26N-R4W
Rio Arriba County, NM

Dear Mr. LeMay:

Union Texas Petroleum Corporation is applying for an administrative downhole commingling order for the referenced well in the Basin Dakota, Wildhorse Gallup, and Blanco Mesaverde fields, as per Order #R-7508. The ownership of the zones to be commingled is common. The offset operator is Jerome P. McHugh & Associates. The Bureau of Land Management and this offset operator will receive notification of this proposed downhole commingling.

We are planning to drill this well during the summer of 1987. Prospective intervals in the Dakota, Gallup, and Mesaverde will be perforated and fractured separately. As with the offset wells, we anticipate that each of these formations would be marginal if produced separately. A dual completion would introduce waste since at least one side would be too weak to produce, or one interval would have to be squeezed, or both.

The following table lists others wells on our Jicarilla H lease that are commingled. These wells have not experienced any detrimental effects due to the commingling.

<u>Well</u>	<u>Location</u>	<u>Formation</u>	<u>Commingled Date and Order</u>
Jicarilla H #7	K 19 26 4	Gal-DK	9/81 R-5861
Jicarilla H #7E	D 19 26 4	MV-Gal-DK	4/84 R-7508
Jicarilla H #12	A 17 26 4	Gal-DK	4/84 R-7509
Jicarilla H #8	K 19 26 4	Gal-DK	8/85 DHC-562
Jicarilla H #12M	I 17 26 4	MV-Gal-DK	3/87 DHC-640
Jicarilla H #11E	K 18 26 4	MV-Gal-DK	3/87 DHC-639

Page 2

The reservoir characteristics of each of the subject zones are such that underground waste would not be caused by the proposed downhole commingling. The fluids from each zone are compatible and no precipitates will be formed to cause damage to either reservoir. The daily production will not exceed the limit of Rule 303c, Section 1a, Part 1. Both fluids have an API oil gravity close to 58°. The initial shut-in casing pressure for the Mesaverde, Gallup and Dakota are anticipated to be 900 psi, 950 psi, and 1550 psi, respectively.

The District Office in Aztec will be notified anytime the commingled well is shut-in for seven (7) consecutive days.

To allocate the commingled production to each of the zones, Union Texas Petroleum will consult with the District Supervisor of the Aztec District Office of the Division to determine an allocation formula for each of the productive zones.

Included with this letter is a plat showing ownership of offsetting leases, a letter to the offset operator, and wellbore diagram.

Yours truly,

P. M. Pippin
Production Engineer

Gentlemen:

Union Texas Petroleum Corporation is in the process of applying for a downhole commingling order for their Jicarilla H #8E well located 1850' FNL and 1650' FEL, Section 19, T26N-R4W, N.M.P.M., Rio Arriba County, New Mexico, in the Basin Dakota, Wildhorse Gallup and Blanco Mesaverde.

The purpose of this letter is to notify you of such action. If you have no objections to the proposed commingling order, we would appreciate your signing the attached copy of this letter and returning it to this office.

Your prompt attention on this matter would be appreciated.

Yours truly,

P. M. Pippin
