Dear Mr. Hayden:

In accordance to approved C-103, Energen Resources Corp. was required to consult with the Aztec office upon completion of this well to determine the fixed allocation method for production. The test data from 1 hour stabilized tests during completion are as follows:

|                     |                  |
|---------------------|------------------|
| Mesa Verde          | 270 MCFD         |
| Mesa Verde & Dakota | 190 MCFD & .1 BO |

It is recommended the production be allocated as follows:

|                       |                                  |
|-----------------------|----------------------------------|
| <b>Mesa Verde</b>     | <b>270/ 460 = .59 or 59% gas</b> |
| <b>Dakota</b>         | <b>190/ 460 = .41 or 41% gas</b> |
| <b>Oil Production</b> | <b>100% to Dakota</b>            |

If additional information is needed, please contact me.

Sincerely;

  
Gary W. Brink  
Production Superintendent
