(INDICATE ABOVE BY CHECK MARK NATURE OF REPORT, NOTICE, OR OTHER DATA)

August 5, 1957

Well No. 1 is located 560 ft. from S line and 1980 ft. from E line of sec. 33
SE 1/4 33 25N 10W N.M.P.
 (1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Undesignated San Juan New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6857 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

The casing was perforated with cone shots 4 per foot from 5334 to 5349 and 5363 to 5378. The pay was treated with 500 gallons sand acid and scrubbed 3.5 BOPH after treatment. This was followed with a treatment of 30,000 gallon sand-oil Frac. with 1 pound 20/40 sand per gallon. After recovery of load the well flowed 22.5 BOPH on 32/64" choke with 200 # tubing pressure and a G.O.R. of 234-1.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
