1. The first condition is that the price of the commodity must be high enough to cover the cost of production. This is the condition of profitability. If the price is too low, the producer will not be able to cover his costs and will be forced to stop production. This is the condition of survival. If the price is too high, the consumer will not be able to afford the commodity and will be forced to stop consumption. This is the condition of utility. The price must be high enough to cover the cost of production, low enough to be affordable by the consumer, and high enough to be profitable for the producer. This is the condition of equilibrium.

It is of the greatest importance to have a complete history of the well. Please state in detail the dates of redrilling, together with the reasons for the work and its results. If there were any changes made in the casing, state fully, and if any casing was "sidetracked" or left in the well, give its size and location. If the well has been dynamited, give date, size, position, and number of shots. If plugs or bridges were put in to test for water, state kind of material used, position, and results of pumping or bailing.
