DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

The well was spudded 9:30 P. M., 6-4-56. A 12 1/4" hole was drilled to 197' and 8 5/8" casing was set at 191' with 175 sx cement. Continued circulating after wait of 24 hours for the cement to set. Pressured up casing to 1000' for 20 min. No loss in pressure.

The well was then drilled to 3000' and 5 1/2" casing was run to 4998' and cemented with 250 sx of reg. and 125 sx. foamix. After waiting for cement to set, the casing was tested to 1500' for 30 min with no loss in pressure. The top of the cement is at 3450' by temperature survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
