U. S. GEOLOGICAL SURVEY  
FARMINGTON, NEW MEXICO

The elevation of the derrick floor above sea level is 6197 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

On July 18, 1957, the following perforations were perforated with four shots per foot: 4790-4826, 4859-4869, 4875-4884. These perforations were then sand-oil fracked with 49,100 gallons oil and 50,000 pounds sand. Pressure broke at 2050 pounds. Average injection rate 40 BPM. Then flowed 21 HOPH for 5 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
