DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudlogging jobs, cementing points, and all other important proposed work)

This well has developed a leak in the casing opposite the wenefee formation at 2600' to 2700'. We propose to seal the leaks off by squeezing the section with cement. The squeeze will be tested to 2000 PSI for 30 minutes.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
