Well No. 990 is located 25 ft. from [S] line and 13 ft. from [E] line of sec. 3
1/4 Section 3
25 North, 13 East
T. 22 N., R. 10 E., S. 3
(Range) (Meridian) New Mexico
Ground (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing jobs, and all other important proposed work)
Set 3-5/8" 24# casing at 100' and cement with 75 sacks regular cement. W.C. of hrs.
Set 3 1/2" 14# J-55 casing on top of Pictured Cliff Sand, 3 1/2" equipped with Baffle Collar and Float Shoe and two Centralizers. Run Temperature Survey to determine top of cement behind 3 1/2". W.C. 72 hours. Core the entire Pictured Cliffs Sand. Run Schlumberger Electrical Log and Microlog Pictured Cliff Sand, Farmington Sand, and Fruitland Sand before setting production string. Straight hole test at 100'. Maximum deviation one degree and at every 250' intervals to 1.0. with maximum deviation of three degrees. Start 3' samples and drilling time at 800'. Mud shall be conditioned to obtain good drilling samples. Steel Line Measurement at 1000' and before coving. 3 1/2" 14# J-55 casing to be set on top of Pictured Cliff Sand after the hole has been runned to bottom of sand. Clean out with cable tools and test. Shoot with 3 quarts SG per foot with no temp. Clean out to total depth and run 1" siphon.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
