

MULTI-POINT SURFACE USE PLAN

Shell-Carson 202

790' FNL 1100' FEL

Section 10, T25N, R12W

San Juan County, New Mexico

1. Existing Roads. Please refer to attached map, designated Attachment A. The map illustrates existing roads in the area. New roads which will be required have been appropriately labeled on this map. All existing and new roads will be properly maintained during the duration of this project.
2. Planned Access Roads. Refer to Attachment A. The grade of the access road will be consistent with local terrain. Road surfaces will not exceed twenty feet (20') in width. After completion of all work on the subject well, the access road will be adequately drained to control soil erosion. Drainage facilities may include ditches, water bars, culverts, or any other measure deemed necessary by trained company personnel to insure proper drainage.
3. Location of Existing Wells. Several - see Attachment B.
4. Location of Tank Batteries, Production Facilities, and Production Gathering and Service Lines. Will be discussed and reviewed during the field inspections.
5. Location and Type of Water Supply. Shell proposes to obtain the water from the nearest existing source.
6. Source of Construction Material. No additional materials will be required to build either the access road or the proposed location.
7. Method of Handling Waste Materials. All garbage and trash material will be put into a burn pit. When clean-up operations are begun on the proposed project, the burn pit and its refuse will be buried to a depth of at least three (3) feet or hauled to an authorized disposal. A latrine will be provided for human waste. If large amounts of liquid are left in the reserve pit after completion of the project, the pit will be fenced until the liquids have had adequate time to dry. The location clean-up will not take place until such time as the reserve pit can be properly covered over to prevent runoff from carrying any of these materials into the watershed. No earthen pit will be located on natural drainage; all earthen pits will be so constructed as to prevent leakage from occurring.
8. Ancillary Facilities. No camps or airstrips will be associated with this project.
9. Wellsite Layout. 125' x 125' area centering on drill site stake.
10. Plans for Restoration of the Surface. After completion of the proposed project, the location will be cleaned and leveled. The location will be left in such a condition that will enable reseeding operations. Reseeding will be performed during the time period set forth by the regulatory body.
11. Other Information. This terrain is relatively level. Several well sites are located in the immediate area.
