13. Describe Proposed or Completed Operations

It is intended to recomplete the subject well in the Fruitland Coal formation by pulling the 2 3/8" tubing. Setting a cast iron bridge plug at approximately 2100'. Run a cement bond log and a compensated neutron log across the Fruitland Coal interval. Perforate at approximately 1950-2085'. Stimulate the perforations with linear gel and nitrogen foam. Flow the well back and clean up after stimulation. Drill out the cast iron bridge plug and clean out the well to total depth. Land tubing at approximately 2155'. The well will then be down hole commingled. A down hole commingle application will be submitted.
