The elevation of the derrick floor above sea level is **7038** ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

- Set 5-1/2" casing at 1884' and pulled 8-5/8" cable string and cemented 5-1/2" casing with 75 sacks of cement, but was unable to complete displacement leaving 699' cement in casing.
- Drilled out cement in casing to 1884'. Perforated 5-1/2" casing with 2 shots per foot at 1860' and squeezed below retainer set at 1835' with 75 sacks of cement.
- Requeened with 75 sacks of cement and drilled to 1885' with water entry in hole 1-1/2 barrels water per hour.
- Requeened with 75 sacks of cement around shoe and drilled out cement to 1870' and bailed hole dry. After bailing hole dry resumed drilling operations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations are to be commenced.
