## NORTHWEST NEW MEXICO PACKER-LEAKAGE TEST

Operator MERIDIAN OIL INC. Lease JOHNSTON A COM C Well No. 9  
Location  
of Well: Unit L Sect. 36 Twp. 027N Rge. 006W County RIO ARriba

	NAME OF RESERVOIR OR POOL	TYPE OF PROD. (Oil or Gas)	METHOD OF PROD. (Flow or Art. Lift)	PROD. MEDIUM (Tbg. or Csg.)
Upper Completion	<b>PICTURED CLIFFS</b>	<b>GAS</b>	<b>FLOW</b>	<b>TUBING</b>
Lower Completion	<b>MESAVERDE</b>	<b>GAS</b>	<b>FLOW</b>	<b>TUBING</b>

### PRE-FLOW SHUT-IN PRESSURE DATA

Upper Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
	<u>7-12-96</u>	<u>144 hrs</u>	<u>168<sup>+</sup></u>	<u>Yes</u>
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
	<u>7-12-96</u>	<u>96 hrs</u>	<u>331<sup>+</sup></u>	<u>Yes</u>

### FLOW TEST NO. 1

Commenced at (hour,date)*				Zone producing (Upper or Lower) <u>lower</u>	
TIME (hour,date)	LAPSED TIME SINCE*	PRESSURE		PROD. ZONE	REMARKS
		Upper Completion	Lower Completion	TEMP	
<u>7-16-96</u>	<u>96 hrs</u>	<u>161<sup>+</sup></u>	<u>331<sup>+</sup></u>		<u>lower zone open for flow</u>
<u>7-17-96</u>	<u>120 hrs</u>	<u>168<sup>+</sup></u>	<u>259<sup>+</sup></u>		
<u>7-18-96</u>	<u>144 hrs</u>	<u>168<sup>+</sup></u>	<u>281<sup>+</sup></u>		

Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. in \_\_\_\_\_ Hours. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR \_\_\_\_\_

Gas: \_\_\_\_\_ MCFPD; Tested thru (Orifice or Meter): \_\_\_\_\_

### MID-TEST SHUT-IN PRESSURE DATA

Upper Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)
Lower Completion	Hour, date shut-in	Length of time shut-in	SI press. psig	Stabilized? (Yes or No)

(Continue on reverse side)

## FLOW TEST NO. 2

Commenced at (hour, date)**				Zone producing (Upper or Lower):	
TIME (hour, date)	LAPSED TIME SINCE**	PRESSURE		PROD. ZONE TEMP.	REMARKS
		Upper Completion	Lower Completion		

Production rate during test

Oil: \_\_\_\_\_ BOPD based on \_\_\_\_\_ Bbls. in \_\_\_\_\_ Hours. \_\_\_\_\_ Grav. \_\_\_\_\_ GOR \_\_\_\_\_

Gas: \_\_\_\_\_ MCFPD; Tested thru (Orifice or Meter): \_\_\_\_\_

Remarks: \_\_\_\_\_

I hereby certify that the information herein contained is true and complete to the best of my knowledge.

Approved \_\_\_\_\_ JUL 30 1986 \_\_\_\_\_ Operator MERIDIAN OIL, INC.

New Mexico Oil Conservation Division

By \_\_\_\_\_ DOLORES DIAZ

By \_\_\_\_\_ Title OPERATION ASSISTANT

Title Deputy Oil &amp; Gas Inspector Date 7-26-86

## NORTHWEST NEW MEXICO PACKER LEAKAGE TEST INSTRUCTIONS

1. A packer leakage test shall be commenced on each producing well within seven days after original completion of the well, and annually thereafter as specified by the order authorizing the multiple completion. Such tests shall also be commenced up all holes to completions within seven days following recompletion and/or chemical or free-flow operations and whenever remedial work has been done on a well during which the packer or the tubing have been disturbed. Tests shall also be taken at any time that communication is suspected or when requested by the Division.
2. At least 72 hours prior to the commencement of any packer leakage test, the operator shall notify the Division in writing of the exact time the test is to be completed. Offset operations shall also be so notified.
3. The packer leakage test shall commence when both zones of the dual completion are shut-in for pressure stabilization. Both zones shall remain shut-in with the well head pressure in each leg stabilized, provided however, that they need not remain shut-in more than seven days.
4. For flow Test No. 1, one zone of the dual completion shall be produced at the natural rate of production while the other zone remains shut-in. Such leg shall be equipped for seven days if the case of a gas well and for 24 hours in the case of an oil well. Note: If, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline extension this flow period shall be three hours.
5. Following completion of flow Test No. 1, the well shall again be shut-in, in accordance with Paragraph 3 above.
6. Flow Test No. 2 shall be conducted even though the first test is timed during flow Test No. 1. Procedure for Flow Test No. 2 is to be the same as for Flow Test No. 1.

except that the previously produced zone shall remain shut-in while the zone which was previously shut-in is produced.

7. Pressures for gas zone tests must be measured on each zone with a deadweight pressure gauge at the intervals as follows: 3 hours tests: immediately prior to the beginning of each flow period, at fifteen minute intervals during the first hour thereof, and at hourly intervals thereafter, including one pressure measurement immediately prior to the flow period, at least one time during each flow period (at approximately the shut-in point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.

24-hour oil zone tests: all pressures, throughout the entire test, shall be continuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressure as required above being taken on the gas zone.

8. The results of the above described tests shall be filed in triplicate within 15 days after completion of the test. Tests shall be filed with the Area District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer Leakage Test form Revland 8/81/78 with all deadweight pressures indicated thereon as well as the flowing temperatures (gas zones only) and gravity and GOR (oil zones only).
