		NORTHWEST	NEW MEXICO PACKE	R LEAKAGE TEST IN	STRUCTIONS						

- 1. A pacing leakage test shall be commenced on each multiply com ed well within e actual completion of the well, and summand on and multiple completions well witten seven days after actual completion of the well, and summitty thereafter as prescribed by the order authorizing the multiple completion. Such tests shall also be connected on all multiple completions within seven days following recompletion and/or chemical or frac-ture treatment, and whenever during which the packer or the taking have been disturbed. Tests a communication is suspected or when recuested by the Division. ed. Tosts shall also be taken at any time that
- 2. At seast 72 hours prior to the commencement of any packer leakage test, the operator shall notify Division in writing of the exact time the test is to be commenced. Offset operators shall also be so or shall notify the
- 3. The packer leakage test shall commence when both zones of the dual completion are shall-in for pressure stabilization, both zones shall remain shall-in until the well-head pressure in each has stabilize provided however, that they need not remain shall-in move than seven days.
 4. For flow Test No. 1, one zone of the dual completion shall be produced at the normal rate of production while the other zone remains shall-in. Such test shall be continued for seven days if the case a gas well and for 24 hours in the case of an oil well. Note: if, on an initial packer leakage test, a gas well is being flowed to the atmosphere due to the lack of a pipeline connection the flow period shall be there cause. three nours.
- pletion of flow Test No. 1, the well shall again be shut-in, in accordance with
- 5. Stowars company to the stoward of the stoward o

- except that the previously produced zone shall remain shut-in while the zone wh
- except that the previously promoca zone snau remain success with a deadweight van previously shat-in is produced.

 7. Pressures for gas-acce tests must be measured on each zone with a deadweight pressure gauge at time intervals as follows: 3 hours tests: immediately prior to the beginning of each flow-period, at fifteen minute intervals during the first hour thereof, and at hearly intervals thereafter, including one pressure measurement immediately prior to the flow period, at least one time during each flow period (at
- immediately prior to the flow period, at least one time during each flow period (at approximately the midway point) and immediately prior to the conclusion of each flow period. Other pressures may be taken as desired, or may be requested on wells which have previously shown questionable test data.

 24-hour oil zone tests: all pressures, throughout the entire test, shall be constinuously measured and recorded with recording pressure gauges the accuracy of which must be checked at least twice, once at the beginning and once at the end of each test, with a deadweight pressure gauge. If a well is a gas-oil or an oil-gas dual completion, the recording gauge shall be required on the oil zone only, with deadweight pressure as required above being taken on the gaz zone.

 8. The results of the above described tests shall be filed in tripticate within 15 days after completion of the test. Tests shall be filed with the Aziec District Office of the New Mexico Oil Conservation Division of Northwest New Mexico Packer Lealunge
- aner compensus or use seat. 16ses small so men with use Aziec Learner O'moe or use New Mexico Oil Conservation Division of Northwest New Mexico Packer Leakage Test form Revised 10/01/78 with all deadweight pressures indicated thereon as well /78 with all deadweight pressures indicated thereon as well res (gas zones only) and gravity and GOR (oil zones only).
