April 3, 1953

Well No. 34 (PN) is located 990 ft. from S line and 990 ft. from W line of sec. 30

SW Sec. 30 27N 5W N.M.P.M.
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Blanco & So. Blanco Ert. Rio Arriba New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6406 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is intended to drill and dually complete a well in the Mesa Verde and Pictured Cliffs formations, using rotary tools from surface to total depth. Mud circulation will be used thru the Pictured Cliffs formation, at which point intermediate casing will be set. Gas circulation will then be used thru the Mesa Verde formation, where production liner will be set. All possible production zones in the Mesa Verde and Pictured Cliffs formations will be perforated and fractured. Estimated total depth 5515'.

Casing Program:

- 10 3/4" surface casing at 170' with 150 sacks cement.
- 7 5/8" intermediate casing at 3230' with 250 sacks cement.
- 5 1/2" production liner at 5515' with 300 sacks cement.

The W/2 of Section 30 is dedicated to the Mesa Verde formation.

The SW/4 of Section 30 is dedicated to the Pictured Cliffs formation.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

W/2: S.F. 079367 (SW/4, S/2NW/4, NE1/4); Fee--Pacific Northwest (NE1/4).
