Well No. 125 (MD) is located 990 ft. from SW line and 1650 ft. from W line of sec. 26
SW/4 Sec. 26 27E 6N N.M.P.M.
 (Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Blanco N.V. & Wildcat Lek. Rio Arriba New Mexico
 (Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 6632 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate sanding jobs, cementing points, and all other important proposed work)

On Dec. 18, 1959, at approximately 3 P.M. The Rincon Unit well No. 125 (MD) caught on fire while cleaning out the well after a Dakota frac. The majority of the rig was burned beyond further use, the wellhead installation was damaged, and two members of the crew were burned immediately after the well caught on fire. The one crewman had minor burns and the other had approximately 50% of his body burned. Both crewmen will recover from their burns.

On the date of the fire El Paso Natural Gas Co. crews worked thru the night to remove all possible iron and steel away from the fire. The following morning, after the well had been cleared of debris, a dike was formed within a radius of 15' of the well and the pit inside of that dike was filled with water to the topmost level of the wellhead, thus keeping the wellhead equipment cool. The well was blowing an estimated 5 MCF of gas through the wellhead.
